

EV ENERGY

The Youngstown/Warren Regional Chamber is pleased to partner with the EV Energy Group as our preferred provider for members interested in installing electric vehicle charging stations.

Having EV Energy as a preferred provider puts the Chamber and the entire community at the cutting edge of this emerging industry and shows support for “Voltage Valley!”

EV Energy Group’s charging stations are ideal for businesses that want to provide for their customers and/or employees. The company sells world-class software, equipment and media solutions that accelerate the adoption of electric vehicles, with a goal of making a significant contribution towards the transformation to a sustainable, zero-carbon economy.

The company offers a variety of charging stations—including some that feature digital media towers so that businesses can advertise or sell advertising and also receive analytics through EV Energy’s “Insights” division. EV Energy Group also helps businesses navigate the waters of claiming the local, state and federal funds that have been earmarked to support the establishment and growth of electric vehicles and electric charging networks. In addition, the Regional Chamber can also provide a list of members that may install the stations.

As a benefit, Chamber members who choose EV Energy will receive publicity around their decision to support Voltage Valley as well as a more environmentally friendly fuel source, with a news release and ceremonial ribbon cutting.

For more information or to discuss your options with charging stations, please contact EV Energy’s Vice President of Business Development Frank Cozza at 248-761-9396 or frank.cozza@evenergygroup.com.
